PROJECT 2

Page 82:

The sidebar should read:

> *These same characters can be inserted using the Insert>HTML>Character menu.*

PROJECT 7

Page 313, Step 10

The step incorrectly identifies the file name being used. The step should say:

10. **Make the `info.html` file active, delete the "Content 2" placeholder text, then paste the copied text into the Content 2 area.**

PROJECT 8

Page 337

This project was written using Bootstrap 3.3.7, which was current at the time Dreamweaver CC 2018 was initially released. Bootstrap version 4 has since been introduced, and was integrated into Dreamweaver in post-release updates.

For the project to work properly as written, add the following steps to Page 337, after creating the new site definition and before creating the HTML page on Page 338:

3a. **In the Site Setup dialog box, expand the Advanced options and choose Bootstrap in the list of categories on the left.**

3b. **Choose Bootstrap 3.3.7 in the Bootstrap Version menu, then click DONE.**
