

UPDATES & ERRATA

Interface Project

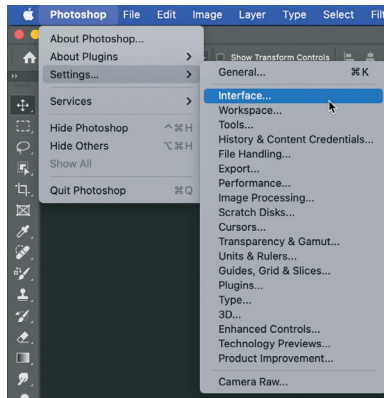

Page 4, Step 10

On Macintosh, preferences are now accessed in the Photoshop>Settings submenu. (According to Adobe, in December 2022, Apple dictated that the word “Preference” may not be used in any application menus.)

This change does not affect Windows users.

Step 10 should read:

10. Macintosh users: Choose Photoshop>**Settings**>Interface.

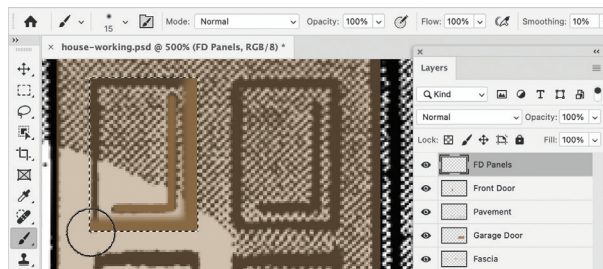

Project 7

Page 388, Steps 6–7

The steps and accompanying images incorrectly identify the edges to be painted. The steps should read:

6. Using the same technique, paint a stroke at the **bottom** edge of the panel.

7. Change the foreground color to **Doors Highlight**, and reduce the brush size to **10 px**. Paint the **top and left** edges of the panel.
