ACKNOWLEDGEMENTS

About Against The Clock

Against The Clock, long recognized as one of the nation's leaders in courseware development, has been publishing educational materials for the graphic and computer arts industries since 1990. The company has developed a solid and widely respected approach to teaching people how to effectively use graphics applications while maintaining a disciplined approach to real-world problems.

Having developed the *Against The Clock* and the *Essentials for Design* series with Prentice Hall/Pearson Education, ATC drew from years of professional experience and instructor feedback to develop *The Professional Portfolio Series*, focusing on the Adobe Creative Suite. These books feature step-by-step explanations, detailed foundational information, and advice and tips from professionals that offer practical solutions to technical issues.

WALK-THROUGH

Project Goals

Each project begins with a clear description of the overall concepts that are explained in the project; these goals closely match the different stages of the project workflow.

The Project Meeting

Each project includes the client's initial comments, which provide valuable information about the job. The Project Art Director, a vital part of any design workflow, also provides fundamental advice and production requirements.

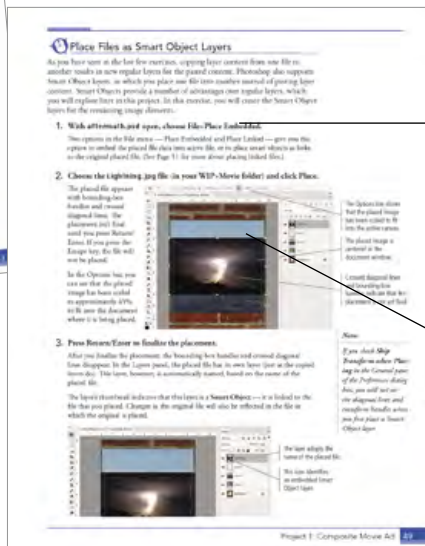

Project Objectives

Each Project Meeting includes a summary of the specific skills required to complete the project.

Real-World Workflow

Projects are broken into logical lessons, or "stages," of the workflow. Brief introductions at the beginning of each stage provide vital foundational material required to complete the task.

Step-By-Step Exercises

Every stage of the workflow is broken into multiple hands-on, step-by-step exercises.

Visual Explanations

Wherever possible, screen captures are annotated so students can quickly identify important information.

Design Foundations

Additional functionality, related tools, and underlying graphic design concepts are included throughout the book.

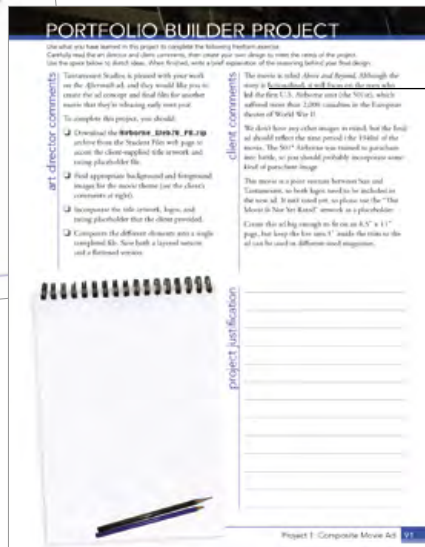

Advice and Warnings

Where appropriate, sidebars provide shortcuts, warnings, or helpful tips.

Project Review

After completing each project, students can complete these fill-in-the-blank and short-answer questions to test their understanding of the concepts in the project.

Portfolio Builder Projects

Each step-by-step project is accompanied by a freeform project, allowing students to practice skills and creativity, resulting in an extensive and diverse portfolio of work.

Visual Summary

Using an annotated version of the finished project, students can quickly identify the skills used to complete different aspects of the job.

Against The Clock's *The Professional Portfolio Series* teaches graphic design software tools and techniques entirely within the framework of real-world projects; we introduce and explain skills where they would naturally fall into a real project workflow.

The project-based approach in *The Professional Portfolio Series* allows you to get in depth with the software beginning in Project 1 — you don't have to read several chapters of introductory material before you can start creating finished artwork.

Our approach also prevents “topic tedium” — in other words, we don't require you to read pages and pages of information about text (for example); instead, we explain text tools and options as part of a larger project (in this case, as part of a set of promotional ads).

Clear, easy-to-read, step-by-step instructions walk you through every phase of each job, from creating a new file to saving the finished piece. Wherever logical, we also offer practical advice and tips about underlying concepts and graphic design practices that will benefit students as they enter the job market.

The projects in this book reflect a range of different types of design jobs, from designing a composite layout to building a Web page with CSS. When you finish the projects in this book (and the accompanying Portfolio Builder exercises), you will have a substantial body of work that should impress any potential employer.

The eight projects are described briefly here; more detail is provided in the full table of contents (beginning on Page viii).
